Synonyms	IFN-alpha 2a, IFNA2a, IFN-alpha 2 (alpha 2a), interferon alpha 2a
Background	Interferon alpha-2 (IFN-α2), encoded by IFNA2 on human chromosome 9p21.3, is a prototypical type I interferon produced mainly by macrophages that elicits potent antiviral, antiproliferative and immunomodulatory responses. Its 188-residue precursor is processed into a secreted 165-residue mature cytokine stabilized by two conserved disulfide bonds (Cys24–Cys121 and Cys52–Cys161). Crystallographic and NMR structures reveal a four-helix bundle that engages the IFNAR1/IFNAR2 receptor and activates JAK–STAT signaling. IFN-α2a differs from IFN-α2b by a single residue (Lys23 vs Arg23) and is used therapeutically against viral hepatitis and several malignancies.
