Description TSPAN8 is a transmembrane protein, also known as Tetraspanin-8. It is a member of the Tetraspanin protein family, primarily expressed on the cell membrane. TSPAN8 plays important roles in various biological processes, including cell adhesion, cell signaling, cell proliferation, and migration.

Studies have shown that the expression levels of TSPAN8 are elevated in various cancers, such as colorectal cancer, liver cancer, pancreatic cancer, etc. It is considered a potential cancer biomarker and may be involved in the initiation and progression of tumors.

Additionally, TSPAN8 has been found to be associated with diseases such as liver fibrosis, inflammation, etc. Research on TSPAN8 helps to further understand its role in the development of diseases, providing new insights for the treatment and diagnosis of related diseases.

SDS-PAGE

On SDS-PAGE under reducing (R) condition. The gel was stained overnight with Coomassie Blue. The purity of the protein is greater than 95%.
