Product Sheet

H_BAFFR Jurkat Blockade Reporter Cell Line

Catalog number: GM-C38328

Version 3.3.1.250117

BAFFR (B-cell activating factor receptor), also known as BR3, is a receptor on B cells that is crucial for their survival, maturation, and differentiation. Encoded by the TNFRSF13C gene, it belongs to the TNF receptor family and includes a transmembrane domain and an extracellular ligand-binding domain.

Its primary ligand, BAFF (B-cell activating factor or BLyS), binds to BAFFR to mediate its effects. Dysregulated BAFF-BAFFR signaling is linked to autoimmune diseases like systemic lupus erythematosus (SLE) and rheumatoid arthritis (RA), making BAFFR a therapeutic target. Anti-BAFF therapies, such as Belimumab, are used clinically to suppress overactive B cells in these conditions.

H_BAFFR Jurkat Blockade Reporter Cell Line is a clonal stable Jurkat cell line constructed using lentiviral technology, constitutive expression of the BAFFR chimeric receptor gene, along with signal-dependent expression of a luciferase reporter gene. When BAFF binds to the BAFFR, it activates the downstream chimeric signaling pathways, leading to the expression of luciferase. Blockade antibodies can inhibit this signal transmission. The luciferase activity measurement indicates the activation level of the signaling pathway and can thus be used to evaluate the in vitro effects of drugs related to BAFF.

Specifications

Quantity	5E6 Cells per vial,1 mL
Product Format	1 vial of frozen cells
Shipping	Shipped on dry ice
Storage Conditions	Liquid nitrogen immediately upon receipt
Recovery Medium	RPMI 1640+10% FBS+1% P.S
Growth medium	RPMI 1640+10% FBS+1% P.S+3.5 μg/mL Blasticidin+0.75 μg/mL Puromycin
Note	None
Freezing Medium	90% FBS+10% DMSO
Growth properties	Suspension
Growth Conditions	37°C, 5% CO_2
Mycoplasma Testing	The cell line has been screened to confirm the absence of Mycoplasma species.
Safety considerations	Biosafety Level 2
Note	It is recommended to expand the cell culture and store a minimum of 10 vials at an early passage for potential future use.

Materials

Reagent	Manufacturer/Catalogue No.
RPMI 1640	VivaCell/C3010-0500
Fetal Bovine Serum	Cegrogen biotech/A0500-3010
Pen/Strep	Thermo/15140-122
Blasticidin	Genomeditech/GM-040404
Puromycin	Genomeditech/GM-040401
Human BAFF Protein; His Tag	Genomeditech/GM-87735RP
Anti-BAFFR hIgG1 Antibody(ianalumab)	Genomeditech/GM-87691AB
Anti-BAFF hIgG1 Antibody(belimumab)	Genomeditech/GM-87690AB
GMOne-Step Luciferase Reporter Gene Assay Kit	Genomeditech/GM-040503

Figures

	H_BAFFR Jurkat Blockade Reporter
EC50	0.05485

Figure 1 | Response to Human BAFF Protein; His Tag. H_BAFFR Jurkat Blockade Reporter Cell Line (Cat. GM-C38328) at a concentration of 1E5 cells/well (96-well format) was stimulated with serial dilutions of Human BAFF Protein; His Tag (Cat. GM-87735RP) in assay buffer (RPMI 1640+1% FBS+1% P.S) for 6 hours. The firefly luciferase activity was measured using the GMOne-Step Luciferase Reporter Gene Assay Kit (Cat. GM-040503). The maximum induction fold was approximately [80.4]. Data are shown by drug mass concentration.

	H_BAFFR Jurkat Blockade Reporter
IC50	0.1906

Figure 3 | Response to Anti-BAFF hIgG1 Antibody(belimumab). Serial dilutions of Anti-BAFF hIgG1 Antibody(belimumab) (Cat. GM-87690AB) was incubated with 16 ng/well of Human BAFF Protein; His Tag (Cat.GM-87735RP) for 1 hour in assay buffer (RPMI 1640+1% FBS + 1% P.S). After pre-incubation, add the mixture to the H_BAFFR Jurkat Blockade Reporter Cell Line (Cat. GM-C38328) at a density of 1E5 cells/well in a 96-well format, and incubate for 6 hours. Firefly luciferase activity is then measured using the GMOne-Step Luciferase Reporter Gene Assay Kit (Cat. GM-040503). The results indicated maximum blocking folds of approximately [30.0]. Data are shown by drug mass concentration

Figure 4 | Response to Anti-BAFF hIgG1 Antibody(belimumab). Serial dilutions of Anti-BAFF hIgG1 Antibody(belimumab) (Cat. GM-87690AB) was incubated with 16 ng/well of Human BAFF Protein; His Tag (Cat.GM-87735RP) for 1 hour in assay buffer (RPMI 1640+1% FBS + 1% P.S). After pre-incubation, add the mixture to the H_BAFFR Jurkat Blockade Reporter Cell Line (Cat. GM-C38328) at a density of 1E5 cells/well in a 96-well format, and incubate for 6 hours. Firefly luciferase activity is then measured using the GMOne-Step Luciferase Reporter

Gene Assay Kit (Cat. GM-040503). The results indicated maximum blocking folds of approximately [30.0]. Data are shown by drug molar concentration.

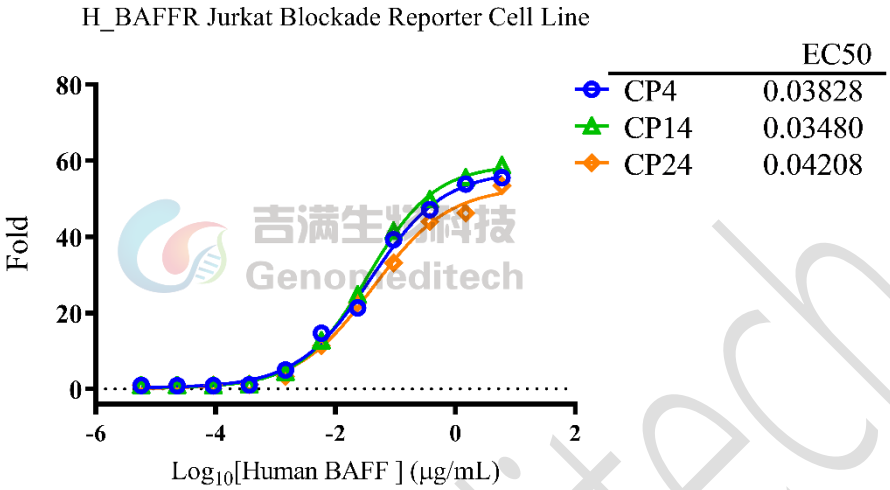

Figure 5 | The passage stability of response to Human BAFF Protein. The passage 4, 14, and 24 of H_BAFFR Jurkat Blockade Reporter Cell Line (Cat. GM-C38328) at a concentration of 1E5 cells/well (96-well format) were stimulated with serial dilutions of Human BAFF Protein (Cat. GM-87735RP) in assay buffer (RPMI 1640 + 1% FBS + 1% P.S) for 6 hours. The firefly luciferase activity was measured using the GMOne-Step Luciferase Reporter Gene Assay Kit (Cat. GM-040503). Data are shown by drug mass concentration.

Cell Recovery

Recovery Medium: RPMI 1640+10% FBS+1% P.S

To insure the highest level of viability, thaw the vial and initiate the culture as soon as possible upon receipt. If upon arrival, continued storage of the frozen culture is necessary, it should be stored in liquid nitrogen vapor phase and not at -70°C. Storage at -70°C will result in loss of viability.

a) Thaw the vial by gentle agitation in a 37°C water bath. To reduce the possibility of contamination, keep the O-ring and cap out of the water. Thawing should be rapid (approximately 2 - 3 minutes).

b) Remove the vial from the water bath as soon as the contents are thawed, and decontaminate by dipping in or spraying with 70% ethanol. All of the operations from this point on should be carried out under strict aseptic conditions.

c) Transfer the vial contents to a centrifuge tube containing 5.0 mL complete culture medium. And spin at approximately 176 x g for 5 minutes. Discard supernatant.

d) Resuspend cell pellet with the recommended complete medium. And dispense the suspension into 1 - 2 T-25 culture flasks.

e) Incubate the culture at 37°C in a suitable incubator. A 5% CO_2 in air atmosphere is recommended if using the medium described on this product sheet.

Cell Freezing

Freezing Medium: 90% FBS+10% DMSO

a) Centrifuge at 176 x g for 3 minutes to collect cells.

b) Resuspend the cells in pre-cooled freezing medium and adjust the cell density to 5E6 cells/mL.

c) Aliquot 1 mL into each vial.

d) Place the vial in a controlled-rate freezing container and store at -80°C for at least 1 day, then transfer to liquid nitrogen as soon as possible.

Cell passage

Growth medium: RPMI 1640+10% FBS+1% P.S+3.5 μg/mL Blasticidin+0.75 μg/mL Puromycin

Approximately 48-72 hours after the initial thawing, the cells can be passaged for the first time. After this initial passage, the culture medium can be adjusted to growth medium supplemented with antibiotics. If cells are not passaged within 48 hours, it is recommended to add some fresh recovery medium and place the flask horizontally.

a) When the cell density reaches 1.5 - 2E6 cells/mL, subculture the cells. Do not allow the cell density to exceed 2E6 cells/mL.

b) It is recommended to use T-25 flasks for subculturing.

c) These cells are suspension cells, and it is recommended to use the "half-medium change" method to maintain optimal cell conditions during passaging.

d) During passaging, you can directly add fresh growth medium to the culture flask, gently pipette to resuspend the cells, and then transfer the cell suspension to a new T-25 flask for continued culture.

Subcultivation Ratio: Maintain cultures at a cell concentraion between 3E5 and 1E6 viable cells/mL.

Medium Renewal: Every 2 to 3 days

Notes

a) These cells are sensitive to density, so please ensure that the cell density is maintained within an appropriate range during culture and subculturing.

b) During the first passage, pay attention to the nutrient supply; if not subculturing, make sure to add fresh recovery medium every other day as needed.
