

# Product Sheet

## H\_IL11 Reporter DDX35™ 293 Cell Line

Catalog number: GM-C40337

Version 3.3.1.251228

IL-11 (interleukin-11) is an IL-6 family cytokine produced mainly by fibroblasts and stromal cells. It signals through an IL-11Ra/gp130 complex to activate JAK/STAT and MAPK pathways, regulating blood cell production, bone metabolism, mucosal repair, and immune responses. Because IL-11 is highly expressed and disease-promoting in many fibrotic conditions and cancers, it is now considered a promising therapeutic target, with neutralizing antibodies and small-molecule inhibitors in development.

H\_IL11 Reporter DDX35™ 293 Cell Line is a clonal stable cell line constructed using lentiviral technology, constitutive expression of the IL11RA and GP130, along with signal-dependent expression of a luciferase reporter gene. When IL-11 binds to IL-11RA and GP130 heterodimer, it activates downstream signaling pathways, leading to the expression of luciferase. The luciferase activity measurement indicates the activation level of the signaling pathway and can thus be used to evaluate the in vitro effects of drugs related to IL-11.

H\_IL11 Reporter DDX35™ 293 Cell Line was obtained through extensive monoclonal screening and multiple rounds of monoclonal selection. It possesses high stability, high sensitivity, and high amplification properties, meeting the standards for customers' batch library construction and release experiments.

## Specifications

<b>Quantity</b>	5E6 Cells per vial, 1 mL
<b>Product Format</b>	1 vial of frozen cells
<b>Shipping</b>	Shipped on dry ice
<b>Storage Conditions</b>	Liquid nitrogen immediately upon receipt
<b>Recovery Medium</b>	DMEM+10% FBS+1% P.S
<b>Growth medium</b>	DMEM+10% FBS+1% P.S+4 $\mu$ g/mL Blasticidin+400 $\mu$ g/mL G418+125 $\mu$ g/mL Hygromycin
<b>Note</b>	None
<b>Freezing Medium</b>	90% FBS+10% DMSO
<b>Growth properties</b>	Adherent
<b>Growth Conditions</b>	37°C, 5% CO <sub>2</sub>
<b>Mycoplasma Testing</b>	The cell line has been screened to confirm the absence of Mycoplasma species.
<b>Safety considerations</b>	Biosafety Level 2
<b>Note</b>	It is recommended to expand the cell culture and store a minimum of 10 vials at an early passage for potential future use.

## Materials

Reagent	Manufacturer/Catalogue No.
DMEM	Gibco/C11995500BT
Fetal Bovine Serum	ExCell/FSP500
Pen/Strep	Thermo/15140-122
Blasticidin	Genomeditech/ <a href="#">GM-040404</a>
G418	Genomeditech/ <a href="#">GM-040402</a>
Hygromycin	Genomeditech/ <a href="#">GM-040403</a>
Human IL-11 Protein; His Tag	Genomeditech/ <a href="#">GM-87734RP</a>
Anti-IL-11RA hIgG1 Antibody(58B10-9C3-4E5)	Genomeditech/ <a href="#">GM-57287AB</a>
Anti-gp130/IL6ST Antibody (PE), Mouse Monoclonal	SinoBiological/10974-MM11-P
GMOOne-Step 2.0 Luciferase Reporter Gene Assay Kit	Genomeditech/ <a href="#">GM-040513</a>

## Figures

Figure 1 | The passage stability of response to Human IL-11 Protein; His Tag. The passage 5, 15, 25, 35, 45 and 55 of H\_IL11 Reporter DDX35™ 293 Cell Line (Cat. GM-C40337) at a concentration of 1.5E4 cells/well (96-well format) was stimulated with serial dilutions of Human IL-11 Protein; His Tag (Cat. GM-87734RP) in assay buffer (DMEM+1% FBS+1% P.S) for 6 hours. The firefly luciferase activity was measured using the Luciferase Reporter Assay Kit (Genomeditech). Data are shown by drug mass concentration.

Figure 2 | The passage stability of response to Human IL-11 Protein; His Tag. The passage 4 and 54 of H\_IL11 Reporter DDX35™ 293 Cell Line (Cat. GM-C40337) at a concentration of 1.5E4 cells/well (96-well format) was stimulated with serial dilutions of Human IL-11 Protein; His Tag (Cat. GM-87734RP) in assay buffer (DMEM+1% FBS+1% P.S) for 6 hours, in triplicate. The firefly luciferase activity was measured using the Luciferase Reporter Assay Kit (Genomeditech). Data are shown by drug mass concentration.

Figure 3 | The passage stability of the H\_IL11 Reporter DDX35™ 293 Cell Line (Cat. GM-C40337) was determined by flow cytometry using Anti-IL-11RA hIgG1 Antibody(58B10-9C3-4E5) (Cat. GM-57287AB).

Figure 4 | The passage stability of the H\_IL11 Reporter DDX35™ 293 Cell Line (Cat. GM-C40337) was determined by flow cytometry using IL6ST/GP130/CD130 Antibody,mouse MAB (Sino biological/10974-MM11).

Figure 5 | Response to Recombinant Human IL-11 Protein; His Tag. H\_IL11 Reporter DDX35™ 293 Cell Lin (Cat. GM-C40337) at a concentration of 1.5E4 cells/well (96-well format) was stimulated with serial dilutions of Human IL-

11 Protein (Cat. GM-87734RP) in assay buffer (DMEM+1% FBS+1% P.S) for 6 hours. The firefly luciferase activity was measured using the Luciferase Reporter Assay Kit (Genomeditech). The maximum induction fold was approximately [19.2]. Data are shown by drug mass concentration.

Figure 6 | Response to Recombinant Human IL-11 Protein; His Tag. H\_IL11 Reporter DDX35™ 293 Cell Lin (Cat. GM-C40337) at a concentration of 1.5E4 cells/well (96-well format) was stimulated with serial dilutions of Human IL-11 Protein (Cat. GM-87734RP) in assay buffer (DMEM+1% FBS+1% P.S) for 6 hours. The firefly luciferase activity was measured using the Luciferase Reporter Assay Kit (Genomeditech). The maximum induction fold was approximately [19.2]. Data are shown by drug molar concentration.

## Cell Recovery

Recovery Medium: DMEM+10% FBS+1% P.S

To insure the highest level of viability, thaw the vial and initiate the culture as soon as possible upon receipt. If upon arrival, continued storage of the frozen culture is necessary, it should be stored in liquid nitrogen vapor phase and not at -70°C. Storage at -70°C will result in loss of viability.

- a) Thaw the vial by gentle agitation in a 37°C water bath. To reduce the possibility of contamination, keep the O-ring and cap out of the water. Thawing should be rapid (approximately 2 - 3 minutes).
- b) Remove the vial from the water bath as soon as the contents are thawed, and decontaminate by dipping in or spraying with 70% ethanol. All of the operations from this point on should be carried out under strict aseptic conditions.
- c) Transfer the vial contents to a centrifuge tube containing 5.0 mL complete culture medium and spin at approximately 176 x g for 5 minutes. Discard supernatant.
- d) Resuspend cell pellet with the recommended recovery medium. And dispense into appropriate culture dishes.
- e) Incubate the culture at 37°C in a suitable incubator. A 5% CO<sub>2</sub> in air atmosphere is recommended if using the medium described on this product sheet.

## Cell Freezing

Freezing Medium: 90% FBS+10% DMSO

- a) Centrifuge at 176 x g for 3 minutes to collect cells.
- b) Resuspend the cells in pre-cooled freezing medium and adjust the cell density to 5E6 cells/mL.
- c) Aliquot 1 mL into each vial.
- d) Place the vial in a controlled-rate freezing container and store at -80°C for at least 1 day, then transfer to liquid nitrogen as soon as possible.

## Cell passage

Growth medium: DMEM+10% FBS+1% P.S+4 µg/mL Blasticidin+400 µg/mL G418+125 µg/mL Hygromycin

For the first 1 to 2 passages post-resuscitation, use the recovery medium. Once the cells have stabilized, switch to a growth medium.

- a) Subculturing is necessary when the cell density reaches 80%. It is recommended to perform subculturing at a ratio of 1:3 to 1:4 every 2-3 days. Ensure that the density does not exceed 80%, as overcrowding can lead to reduced viability due to compression.
- b) Remove and discard culture medium.
- c) Briefly rinse the cell layer with PBS to remove all traces of serum that contains trypsin inhibitor.
- d) Add 1.0 mL of 0.25% (w/v) Trypsin-EDTA solution to dish and observe cells under an inverted microscope until cell layer is dispersed (usually within 30 to 60 seconds at 37°C).
- e) Note: To avoid clumping do not agitate the cells by hitting or shaking the flask while waiting for the cells to detach. Cells that are difficult to detach may be placed at 37°C to facilitate dispersal.
- f) Add 2.0 mL of growth medium to mix well and aspirate cells by gently pipetting.
- g) After centrifugation, resuspend the pellet and add appropriate aliquots of the cell suspension to new culture vessels.
- h) Incubate cultures at 37°C.

**Subcultivation Ratio: A subcultivation ratio of 1:3 - 1:4 is recommended**

**Medium Renewal: Every 2 to 3 days**

## Notes

- a) Upon initial thawing, a higher number of dead cells is observed, which is a normal phenomenon. Significant improvement is seen after adaptation. Once the cells reach a stable state, the number of dead cells decreases after subculturing and the cell growth rate becomes stable.
- b) Ensure that the cell density does not exceed 80%, as overcrowding may lead to reduced viability due to compression.
